

From 2D Sketches to 3D > Models

Technology Challenge for Start-Ups

A. De Nicolò | VP Engineering, Global Segment Small |
16.05.2019

Developing New Solutions for Customers Around The World

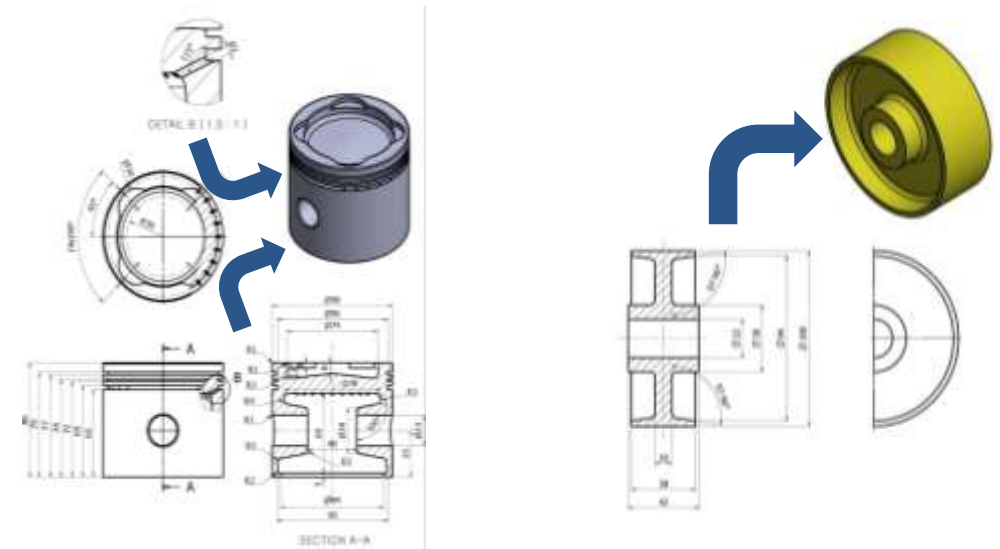

> Close Collaboration with Customers

- Share data and knowledge
- Work towards a common goal
- Daily business
- Global company

> Calculate Quotation

- Start with technical drawings (2D sketches)
- Rely on huge expertise of our engineers
- Compare to already completed orders
- Estimate:
 - Work steps
 - Machines
 - Production speed
 - Cost/benefits

The Challenge

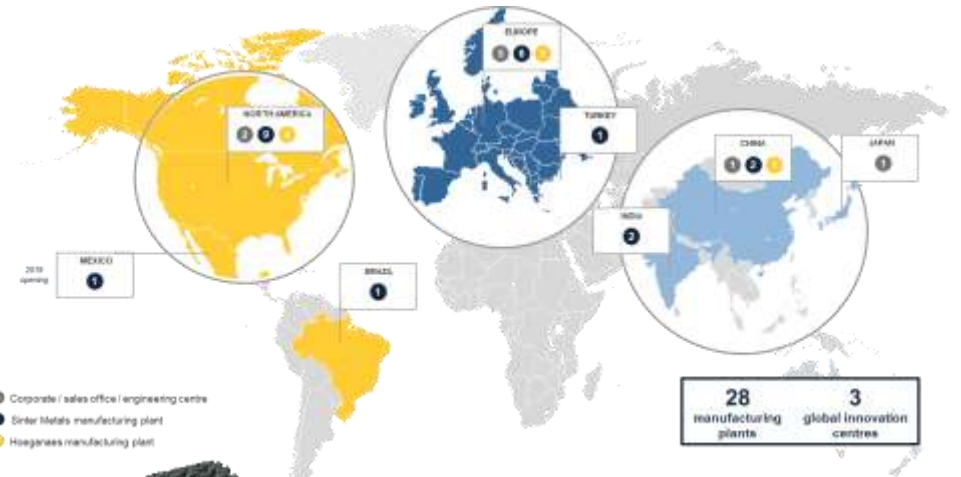

> Make Excellent Quotation

- Fast response
- Outstanding cost vs. benefits ratio
- Find similar parts and best in class examples

> Impediments

- Global company
- Several 1.000 products
- Information "stored" in human head
- Huge legacy
- Often only 2D sketches

➔ 3D models required to use AI and ML

> Generate 3D Models out of 2D Sketches

- Technical drawings
- Fuse single views to one model
- Extract dimensions from drawings
- Parametrize model
- Consider tolerances

> SW-Workflow (tentative)

- Fully-automatic generation of 3D models out 2D sketches (highly desirable)
- Semi-automatic generation (tolerable, minimal user interaction, low skilled people)
- Confidence value (to select fully-automatic/semi-automatic)

> Ready to Grow with Us?

- Iterative and incremental approach
- Interdisciplinary team
- Open minded
- Ready to tackle new challenges

> Possible Collaboration (Depending form the quality of your contribution)

- Contract work
- Long-term collaboration
- Shareholder participation
- Incorporation in our global company

→ Demonstrate your professionalism and let us grow together!
